                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Total number of hits satisfying chosen parameters:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          seq length: 0

                                   Patent No. 5800997

GENERAL INFORMATION:

APPLICANT: Beck, James J.

TITLE OF INVENTION: Detection of Maize Fungal Pathogens
TITLE OF INVENTION: Using the Polymerase Chain Reaction
                                                                                                                               Sequence 15, Application US/08742023 Patent No. 5800997

Sequence 6823, Application US/09198452A

Patent No. 6559294

GENERAL INFORMATION:

APPLICANT: Griffais, R.

TITLE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragment TITLE OF INVENTION: thereof and uses thereof, in particular for the diagnosis, prev. TITLE OF INVENTION: and treatment of infection

FILE REFERENCE: 9710-003-999

CURRENT APPLICATION NUMBER: US/09/198,452A

CURRENT APPLICATION NUMBER: US/09/198,452A

CURRENT FILING DATE: 1998-11-24

NUMBER OF SEQ ID NOS: 6849

SEQ ID NO 6823

LENGTH: 20

TYPE: DNA

ORGANISM: Chlamydia pneumoniae

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This is an antisense oligonucleotide directed against the CCR3 receptor. The antisense oligonucleotide inhibits CCR3 receptor expression. The CCR3 receptor is important in the recruitment of eosinophils into the sites of allergic or asthmatic inflammation. The chemokines Botaxin, MCP-4 and RANTES mediate most of their effects through the CCR3 receptor. The invention relates to antisense oligonucleotides directed against a nucleic acid sequence encoding either a CCR3 receptor, a common subunit of interleukin-4 (IL-4) and interleukin-13 (IL-13) receptors, or a common subunit of IL-3, IL-5 and GM-CSF receptors. The antisense oligonucleotides can be used in the treatment or prevention of asthma,
                                  Increasing in vivo efficacy of a nucleic acid molecule that is administered to a mammal for inhibiting inflammation in mammals involves incorporating into the nucleic acid molecule at least nucleotide substitute
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DAP-modified oligonucleotide; pulmonary disease; respiratory disease; neurological disease; cardiovascular disease; rheumatological disease; digestive disease; cutaneous disease; ophthalmological disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       macrophage colony stimulating factor receptors, used for treating or preventing asthma, allergies, hypereosinophilia, inflammation or cancer
                                                                                                                                                                                                                                                                                                                                                                                                  06-JUL-2001; 2001US-303071P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a method for increasing the in vivo efficacy of oligonucleotides and inhibiting inflammation. The coligonucleotides comprise at least one nucleotide substitute of 2.6. diaminopurine (DAP) and/or its analogue. The DAP nucleotide cological molecule that is administered to a mammal. The DAP-modified coligonucleotides are useful in antisense therapy for treating and/or preventing pulmonary/respiratory diseases, neurological diseases, cutaneous diseases, ophthalmological diseases, digestive diseases, cutaneous diseases, ophthalmological diseases, urinary system diseases, cancers. The respiratory system diseases is a sickness associated with can inflammation of the lungs, the airways and/or the nose. The respiratory system disease is a sickness associated with can inflammation of the lungs, the airways and/or the nose. The capiratory distress syndrome, cystic fibrosis, chronic obstructive clung disease, chronic bronchitis, eosinophilic bronchitis, asthma, can allergy, allergic rhinitis, sinusitis and hypereosinophilia. The DAP-modified oligonucleotides are more stable in the body, more effective, and less toxic than standard antisense oligonucleotides. Cadenosine.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      immunoglobuling and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, chemokines receptors, adhesion molecules and their receptors, cytokine and chemokine receptors, adhesion molecules and their receptors, cytokine and chemokine receptors, adenosine receptors, bradykinin receptors, central nervous system (CNS) and peripheral nervous and non-nervous system central receptors, binding proteins and malignancy associated proteins. The care contistense oligonucleotides may be used in this way to treat disorders including respiratory obstruction (especially pulmonary obstruction and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or surfactant hypoproduction which are associated with a disease or condition selected from pulmonary vasoconstriction, inflammation, condition selected from pulmonary vasoconstriction, inflammation, pulmonary transplantation respiration, respiratory distress syndrome (RDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), pulmonary transplantation rejection, pulmonary infections, bronchitis, candor and antisons of chronic obstructive pulmonary disease (COPD), and or cancer. AAF18434 to AAF21543 represent human polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base. (I) can have respiratory, bronchodilator, antiinflammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with lung/respiratory disorders and malignancies, such as stimulating and activating peptide factors and transmitters, transcription factors,
                                                                                                                                                                                                                        Human; adenosine receptor; low adenosine antisense oligonucleotide; phosphorothicate; impaired respiration; inflammation; allergy; allergic disease; bronchoconstriction; inhibitor; antiinflammatory; antiallergic; antiasthmatic; cytostatic; analgesic; impaired airway; lung disease; ischaemic condition; pulmonary vasoconstriction; asthma;
                                                                                                                                                                                                                                                                                                                                                                                Human adenosine receptor related polynucleotide 2nd SEQ ID
                                                                                                                                                                                                                                                                                                                                                                                                                                   28-JUL-2000

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a new composition comprising an CC antisense oligonucleotide (ON) with low adenosine (up to 15%), which carries nucleic acids involved in bronchoconstriction, allergies, and/or CC inflammation. The ON can have antiinflammatory, antiallergic, cytostatic and analgesic activities. The compositions are CC useful for the treatment of diseases associated with inflammation, CC impaired airways, including lung disease and diseases whose secondary CC effects afflict the lungs of a subject. They can be used for treating CC esthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, CC carcinomas, and cancers which may metastasise to the lungs, including the relates of deoxyadenosine which may metastasise to the lungs, including CC carcinomas, and cancers. The reduction of the adenosine content of the ONs reduces side effects. The A-containing ONs break down with the CC invention which correspond to SEQ ID NO:1 to 2815, and then the present cinvention, which correspond to SEQ ID NO:1 to 2815, and then the last CC (AAA32323 to AAA33992) are specifically claimed ONs from the present convention. N.B. Sequences given in the disclosure of the present CC invention do not match up with their corresponding SEQ ID NO: sequences given in the sequences.
                                                                                                                                                                                                                                                                                                                                                                                                            Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to G protein-coupled receptors (GPCRs) for which the endogenous ligand has been identified. Non-endogenous constitutively activated versions of known GPCRs are used in the invention for the direct identification of candidate compounds as receptor agonists, inverse agonists or partial agonists. Such agonists are useful as therapeutic agents for diseases or disorders associated with GPCRs. The present sequence encodes a non-endogenous version of a known human GPCR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Identifying agonists of G protein-coupled receptors (GPCRs) disease treatment, comprises contacting candidate compounds versions of GPCRs -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  stabilize or enhance expression of the receptor in a cell membrane. Assays for investigating properties of the CCR3 receptor are useful for the identification of modulators of eotaxin-mediated CCR3 receptor activity. The identified modulators are useful in the treatment of prophylaxis of allergic or inflammatory disorders which are responsive to regulation of CCR3 receptor activity. The agents are also useful in the treatment of allergy or asthma as well as ophthalmological, inflammatory, gastrointestinal, dermatological, respiratory or pruritic disorders. The agents are useful for treating conjectivitis, inflammatory bowel disease, eczema, allergic rhinitis, nasal polyposis, atopic dermatitis and pruritis, chronic obstructive pulmonary disease (COPD) and other lung disorders and immune disease. The present sequence represents the human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; chemokine (C-C motif) receptor 3; CCR3 gene; haplotyping; genotyping; type IV hypersensitivity reaction; HIV-1; gene therapy; human immunodeficiency virus 1; single nucleotide polymorphism; SNP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Modified CC chemokine receptor-3 useful for identifying modulators of eotaxin-mediated CCR3 receptor for treating allergic and inflammatory disorders, comprises modifications to stabilize or enhance surface
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human chemokine (C-C motif) receptor 3 (CCR3) cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 1068 BP; 231 A; 289 C; 243

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to genetic variants of human chemokine (C-C motif) receptor 3 (CCR3) gene. The invention also relates to compositions and methods for haplotyping and/or genotyping the CCR3 gene in an individual. Polynucleotides of the invention are useful for studying the expression and function of CCR3 and in expressing CCR3 proteins for use in screening CC candidate drugs to treat diseases related to CCR3 activity. They are also cused in gene therapy. The polymorphism and haplotype data is useful for validating whether CCR3 is a suitable target for drugs to treat type IV hypersensitivity reactions and human immunodeficiency virus (HIV)-1, screening for such drugs and reducing bias cells in clinical trials of such drugs. The genotyping method is useful for determining whether an individual has one haplotype or haplotype pairs. The haplotyping method is useful for improving the efficiency and outcome of several steps in the discovery and development of drugs for treating diseases associated with CCR3 activity such as type IV hypersensitivity reactions and HIV-1.

The present sequence is human CCR3 CDNA. The CCR3 gene is located on
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

A consensus DNA sequence (AAT31336) codes for a novel human recept (AAW03378), designated Eos L2 or C-C chemokine receptor 2 (CKR-3). It was deduced by comparing a genomic clone (AAT31334) and a cDNA clone (AAT31335) coding for CKR-3 proteins (AAW03376 and AAW03377)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This is the nucleotide sequence encoding a novel CCKR3 chemokine receptor isolated from a Th0-activated human T-cell cDNA library using the sequence amplified by primers AAT79097 and AAT79098 as a probe. The encoded protein can be used to screen for (ant) agonists that bind to the novel CCF18 chemokines (AAW25941 and AAW25942). These (ant) agonists are useful in the treatment of conditions associated with abnormal physiology or development.
                                                                                                                                                                    Mammalian chemokine receptor-3 and related nucleic identify receptor inhibitors to treat inflammatory autoimmune disorders, certain cancers, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 1071 BP; 231 A; 292 C; 242 G;

novel human C-C chemokine receptor 3, also designated CKR-3, CCR3 or Eos L2, that binds and mediates chemotaxis in response to chemokines such as eotaxin, RANTES and MCP-3. Sequence comparison revealed 2 regions in the cDNA sequence that appeared to be shifted in frame, resulting from an insertion of a base followed by the deletion of a base, or the deletion of a base followed by the insertion of a base. These alterations resulted in 4 contiguous amino acid differences in the predicted proteins (see AAW51744 and AAW51745) at positions 263-266 and 276-279, respectively. In addition, the genomic clone codes for threonine (ACG) at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            7404/c

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              having slightly different sequences. Initial sequence information revealed 2 regions in which the cDNA sequence appeared to be shifted frame, resulting in 2 sets of 4 contiguous amino acid differences in the predicted proteins. Further sequence analysis revealed only a single difference between the 2 open reading frames, the genomic clone coding for threonine at position 276 and the cDNA clone for
                                                                                                                                                                                                                                                                                                                                                                                              Antibodies to chemokine receptor-3 protein - useful and treatment of inflammatory conditions, e.g. aller autoimmune disease, graft rejection or cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 C-C chemokine receptor 3; CKR-3; CCR3; Eos L2; human; G protein-coupled receptor; leukocyte; antibody; antagonist; inflammation; allergy; asthma; graft rejection; infection; autoimmune disease; drug screening; therapy; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 1116
                                                                                                                                                                                                                                                                     This is a consensus sequence constructed by alignment of a genomic DNA sequence (see AAV07402) and a cDNA clone (see AAV07403) coding
                                                                                                                                                                                                                                                                                                                                             Disclosure; Page 137-138; 185pp; English.

                                                                                                                                                                                                                                                                                                                                                                         Gerard
Qin S;
 A genomic DNA clone (AAT31335) codes for a novel receptor (AAW03 designated Eos L2 or C-C chemokine receptor 3 (CKR-3), involved in leukocyte migration associated with inflammation. It was isolated from a human library constructed from eosinophils obtd. from a patient with hyper-eosinophilic syndrome using a probe (p4 cDNA) encoding the MIP-lalpha/RANTES receptor. A CKR-3
                                                                                                                                                                                                      Mammalian chemokine receptor-3 and related nucleic acids - useful identify receptor inhibitors to treat inflammatory disease, e.g. autoimmune disorders, certain cancers, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              position 276 and the cDNA clone for serine (AGC). The predicted amino acid sequence from the consensus is given in AAW51747. CKR-3 nucleic acids, polypeptides, antibodies, agonists and antagonists are useful for diagnosis and treatment of
                                                                                                                                                           Claim 1; Page 111-113; 153pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ş
This cDNA codes for novel human C-C chemokine receptor 3 (see C AAW51745), also designated CKR-3, CCR3 or Eos L2, that binds and mediates chemotaxis in response to chemokines such as eotaxin, C RANTES and MCP-3. The cDNA was isolated from a human eosinophil C cDNA library constructed from eosinophils obtained from a patient C with hypereosinophilic syndrome, and using CKR-1 cDNA as probe. A C genomic DNA sequence (see AAV07402) is also provided as well as a C consensus sequence (see AAV07404) for CKR-3. The invention relates C to isolated and/or recombinant nucleic acids encoding CKR-3, C isolated or recombinant CKR-3 polypeptides, recombinant nucleic acid constructs, host cells useful for production of recombinant C CKR-3 proteins, to antibodies reactive with the receptors, and to methods of using these products to identify ligands, antagonists and agonists of receptor function. Inhibitors of CKR-3 can be used to treat: inflammatory or allergic diseases and conditions,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

The cDNA and genomic clones can be used for the prodn. of recombinant CKR-3 in host cells, or to design antisense sequences useful for treating inflammatory disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Antibodies to chemokine receptor-3 protein - useful for diagnosis and treatment of inflammatory conditions, e.g. allergy, asthma, autoimmune disease, graft rejection or cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Example 8; Page 134-136; 185pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             autoimmune disease;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         or dermatomyositis), systemic anaphylaxis or hypersensitivity
cresponses, drug allergy, insect sting allergy, inflammatory bowel
cdisease, such as Crohn's disease and ulcerative colitis,
cdermatosis such as dermatitis, eczema, atopic dermatitis,
cdermatosis such as dermatitis, urticaria, vasculitis (e.g. necrotizing,
cutaneous and hypersensitivity vasculitis); eosinphilic myositis
cand eosinophilic fasciitis; autoimmune diseases such as rheumatoid
carthritis, psoriatic arthritis, multiple sclerosis, systemic lupus
crythematosus, myasthenia gravis, juvenile onset diabetes,
cardinary including allograft rejection or graft-versus-host
cdisease; cancers with leukocyte infiltration of the skin or organs;
and also reperfusion injury, atherosclerosis, certain haematologic
malignancies, septic shock and endotoxic shock. Promoters of CKR-3
cfunction can be used for treating: immunosuppression e.g. in AIDS
cpatients or individuals undergoing radiation therapy, chemotherapy,
ctherapy for autoimmune disease or other drug therapy, and
conther causes; and infectious disease such as parasitic diseases,
cincluding helminth infections, such as nematodes (round worms).

Chemotograft can also be used for detection and diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 14
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cc immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. Cc The antisense oligonucleotides and (I) can be used to down-regulate the cexpression and or activity of target polypeptides associated with clung/respiratory disorders and malignancies, such as stimulating and communoglobulins and antibodies, antibody receptors, cytokines and communoglobulins, adhesion molecules and their receptors, cytokine and commonkine receptors, adhesion molecules and non-nervous system peptides and receptors, defensins, growth factors; vasoactive peptides and committers, defensins, growth factors; vasoactive peptides and communities, binding proteins and malignancy associated proteins. The concluding respiratory obstruction (especially pulmonary obstruction and/or bronchoconstriction) and/or lung inflammation, allergy(ies) cand/or surfactant hypoproduction which are associated with a disease or condition selected from pulmonary vasoconstriction, inflammation, allergies, asthma, impeded respiration, respiratory diserses syndrome (RDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary cransplantation rejection, pulmonary infections, bronchitis, and/or cancer. AAF18434 to AAF21543 represent human polymucleotide fragments and antisense oligonucleotides used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

                                                                                                                                                                                                                                                                                   Ş
                                                                                                                                                                                                                                                                                                                                                                                    ABK84282/c
                                                                                                                                                                                                                                                                                                                                                                                                                            impaired airways, including lung disease and diseases whose secondary conditions, including lung disease and diseases whose secondary conditions, impeded respiration, respiratory vasoconstriction, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the ONs reduces side effects. The A-containing ONs break down with the crelease of deoxyadenosine which activates adenosine receptors causing conchoconstriction and inflammation. AAA32313 to AAA35312 represent the invention, which correspond to SEQ ID NO:1 to 2815, and then the last of Sequences are also called SEQ ID NO:1 to 185, but the sequences of invention. N.B. Sequences given in the disclosure of the present convention do not match up with their corresponding SEQ ID NO: sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes a new composition comprising an antisense oligonucleotide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antiinflammatory, antiallergic, antiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, immaired airmonic including the composition of diseases.

The invention relates to detecting (M1) granulocyte (GC) activation (CC (GCA), by detecting the level of expression of gene(s) (Ge) identified by CC (DNA (hip analysis as given in the specification, and comparing CC (he expression level to an expression level in an unactivated (GC), where differential expression of GB is indicative of GCA.

CC Also included are modulating (M2) GA by contacting GC with an agent (CC (has alters the expression of at least one gene in Gs; (2) screening (M3) (CC (chronic)) in a tissue, an allergic response in a subject, exposure of a (CC (subject to a pathogen or sterile inflammatory disease using the (CC (chronic)) in a tissue, an allergic response in a subject, exposure of a (CC (chronic)) in a tissue, an allergic response in a subject, exposure of a (CC (chronic)) in a tissue, an allergic response in a subject, exposure of a (CC (chronic)) in a tissue, an allergic response in a subject, exposure of a (CC (chronic)) in a tissue, an allergic response of gene(s) from GS, where (CC (chronic)) in a tissue, an allergic response of gene(s) from GS, where (CC (chronic)) in a tissue, an allergic response of sintlammation, (especially chronic) or in a tissue, where (CC (chronic)) in a tissue of the gene is indicative of inflammation, (especially chronic) or in a tissue, and lergic response in a subject, exposure of a subject to a pathogen or sterile inflammation (especially chronic) or in a tissue having (CC) inflammation with an agent that modulates the expression of gene(s) (CC) proferably in an inflammation in a tissue, M4 is useful for certaining an agent capable of modulating (CC) and the tissue, M2 is useful for condulating GA, M3 is useful for screening an agent capable of modulating (CC) appreciably in an inflammation in a tissue, M4 is useful for condulating GA, M3 is useful for screening an agent capable of modulating (CC) appreciably in an inflammation in a tissue, M4 is useful for condulating (CC) appreciably benefit of the profession of the profession of the profession of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cardiac reperfusion injury; renal reperfusion injury; ARDS; adult respiratory distress syndrome; inflammatory bowel disease; Crohn's disease; ulcerative colitis; periodontal disease; granulocyte activation; chronic inflammation; allergy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and
